CEO Message

As I write these words, the world is grappling with the coronavirus crisis, whose long-term social and economic effects are still unclear. With that said, this much is clear – companies must adapt to survive and thrive in these uncertain times.

DOLAV, I am happy to say, continues to adapt and innovate while providing the highest-quality handling and storage solutions to our customers around the world.

For over 40 years, DOLAV has innovated continually for the benefit of our customers. We have proven to be agile and responsive to change, always thinking one step ahead to maintain our market and product leadership.

A good example of our innovative mindset is the recent introduction of our antimicrobial technology. This ground-breaking technology provides surface protection from contaminants and reduces the presence of bacteria, mould and fungus. Designed to meet the strictest health and safety standards of the food industry, the technology provides lifetime protection to DOLAV's hygienic box pallets.

The current crisis also highlights the importance of sustainable processes, products and businesses. Eliminating the use of one-trip non-returnable containers, DOLAV's eco-friendly solutions are designed for years of productive reuse and can be recycled for many additional years of useful life. Our company is strong and secure, capable of serving your ongoing handling and storage needs in the years ahead.

During these challenging times, our team has stood by our customers and continued to provide outstanding service. I would like to reassure our customers that we are here for you. Partnering together, we can all stay strong well into the future.

Celso Hamer | DOLAV CEO

Profile

Core Business

DOLAV is a leading global provider of superior handling and storage solutions. Renowned for excellence and innovation since 1976, DOLAV specialises in producing large-volume box pallets of unrivalled durability and customisation.

Sustainable Solutions

DOLAV offers four main families of long-lasting solutions: box pallets, foldable box pallets, pallets and waste containers. Delivered to customers in the food, recycling and waste, logistics and agriculture sectors, our reusable and recyclable solutions increase customer profitability while contributing to a more sustainable world.

Global Presence

We serve our growing customer base through our network of 12 subsidiaries and tens of distributors in over 50 countries across the globe. With production sites in France, Israel and the US, as well as multiple regional warehouses, DOLAV possesses the high-capacity production and local supply capabilities required for rapid on-time delivery worldwide.

Customer Focus

At DOLAV, we view our customers as trusted partners, responding quickly and effectively to their ideas and feedback. We take pride in customising our solutions to meet customer requirements, even undertaking joint product development projects when applicable.

Dedicated Team

Our international team has the experience, expertise and can-do attitude to deliver innovative solutions of the highest quality. DOLAV is owned by Kibbutz Dvir and Kibbutz Lahav, agriculture-based cooperative communities that know the true meaning of hard work, mutual respect and fruitful cooperation.

Pioneering Innovation

Our unique technologies enable the production of strong yet flexible HDPE plastic products that are resistant to high-impact contact. Our R&D team continually introduces new innovations – such as antimicrobial, antistatic and tracking technologies – to keep our solutions at the forefront of industry developments.

World-Class Production

DOLAV is known for our comprehensive in-house capabilities – from advanced design and development to world-class production and customisation. At our manufacturing plants, we utilise a range of large injection moulding systems, including one of the world's largest machines, to produce sturdy box pallets weighing up to 100 kg.

Americas Europe, Middle East & Africa Asia-Pacific

Customisation

Build

DOLAV has a dedicated internal team that provides customised solutions for special demands. We can produce custom boxes with different dimensions according to client requests, such as longer box pallets for the recycling of fluorescent lamps or taller boxes for the harvesting of fruit.

Our box pallets can be adjusted in height, length and width to meet your specific needs.

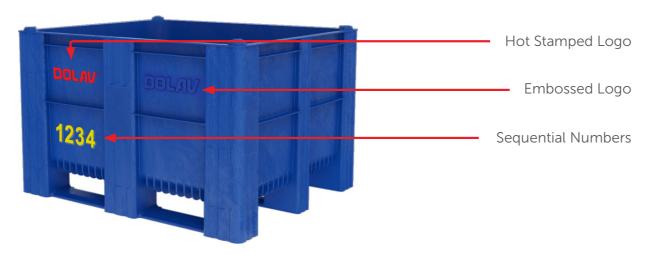

Brand

At DOLAV, we allow you to personalise your products – helping you build your brand, identify your products and reduce your product loss. We offer different branding methods, including hot stamping and embossing, that give your products an indelible proof of ownership. Staying visible for the life of the product, hot stamping can highlight logos, company names, websites, telephone numbers, sequential numbering, lettering, warnings or instructions. Additionally, DOLAV can add in-mould labels and RFID tags to support further personalisation requirements.

Personalisation options

Company names, logos and sequential numbers can be stamped onto your box pallets for easy identification.

Product Overview

DOLAU InnoVation

At DOLAV innovation is in our DNA. We are proud to be both a leader in quality and a pioneer in new and advanced solutions.

Always one step ahead, our goal is to deliver creative innovations that will become new industry standards. Our in-house R&D team constantly explores emerging technologies and materials to deliver not only new and better products but also smarter and more efficient solutions.

AM | Antimicrobial Technology

DOLAV's antimicrobial innovation is enabling the next generation of hygienic box pallets. This revolutionary method allows for permanent protection of the box against microbes including bacteria, mould and fungi.

This development was specifically designed to uphold the strictest health and safety standards set by the food industry, primarily maintaining the highest levels of hygiene while reducing contamination risks.

DM | Detectable Material

As a leading box pallet manufacturer for the global food industry, nothing is more important to us than delivering safe, dependable and hygienic products. The strict regulations of the food industry, along with the essential

need of safe and healthy food, led us to develop a revolutionary solution for avoiding plastics inside food products. Our plastic box pallet with an added detectable material enables the identification of plastic particles in food products using a standard metal detector.

We achieve this by using a food-approved additive to our boxes to ensure strict compliance with FDA guidelines on foreign objects in food products. Our detectable material adds additional cutting-edge benefits to the already proven performance of DOLAV plastic box pallets.

RFID IML Technology

While many companies are utilising the advantages of widespread RFID technology, DOLAV has gone above and beyond by developing a revolutionary RFID tag combined with in-mould labelling (IML) technology.

Through this RFID IML technology, each box pallet encompasses its own unique ID as an integral part of the product that cannot be removed. The combination of RFID and IML technologies allows businesses to become smarter with improved stock management and transport.

ESD | Antistatic Technology

Our electrostatic discharge (ESD) innovation was developed to meet the needs of the electronics, explosives and chemical powder sectors, which demand safe handling of sensitive goods.

We can produce antistatic box pallets and pallets with surface resistivity levels ranging from 10^4 - $10^6~\Omega$, making them ideal for safely carrying ESD-sensitive products.

Tracking Systems

GPS/GPRS/IoT technologies help you track the precise location of your assets, allowing you to maintain control while moving inventory or updating customer order status.

DOLAV can supply GPS/GPRS/IoT technology-based tracking systems to meet client requests.

DOLAV® |

Food

Processing Solutions

The food industry is one of the most demanding sectors in terms of box pallet strength and hygiene. DOLAV's unique foam injection technology enables the production of thick and sturdy walls, ensuring durability against damage and wear over time. Advanced hygienic properties are achieved by our design that delivers smooth clean internal walls with rounded corners. Thanks to one-piece moulding including the runners, there are no hidden dirt traps and our boxes are easy to clean. In addition, our products withstand extreme temperatures ranging from -40°C to +60°C, making them well suited for cold storage.

The combination of these factors makes DOLAV box pallets ideal for meat, fish and dairy products. In line with the stringent requirements of the food industry, we continuously invest resources and efforts in developing products for a "food-safe world". This has spurred us to develop innovative solutions such as detectable material and antimicrobial box pallets.

Logistics

Handling Solutions

Smart long-lasting solutions are required to manage and control the logistics chain. Leveraging our innovation, our clients rely on DOLAV to deliver the latest products and designs to fit any need. DOLAV's foam injection technology ensures that our box pallets achieve a longer lifespan than common high-pressure injection boxes. The durability of our boxes over time makes them particularly appealing for logistics companies that are compelled to focus on efficiency and cost reduction.

Our innovative solutions, including RFID IML tags and GPS/GPRS/IoT tracking systems, place DOLAV at the forefront in providing cutting-edge solutions for controlling fleets of box pallets. DOLAV's pallets, equipped with steel reinforcement for heavy loads, are specially produced for use in automated warehouses.

Recycling

Waste Management Solutions

The recycling industry is known for its intensive and damaging use of box pallets for handling and transporting products. The demanding requirements for high impact resistance make our boxes ideal for this market segment. Our boxes can be successfully used to transport batteries, electrical appliances, metal parts, glass fragments, food waste, recycled materials and much more.

Box pallets with integral runners provide great confidence upon tilting loaded boxes into the recycling system. Our boxes enjoy the most stringent UN certificates for the transport of hazardous materials, including low-radiation materials. Additionally, DOLAV possesses the capability to manufacture custom-sized box pallets for transporting non-standard products such as fluorescent bulbs and lithium batteries.

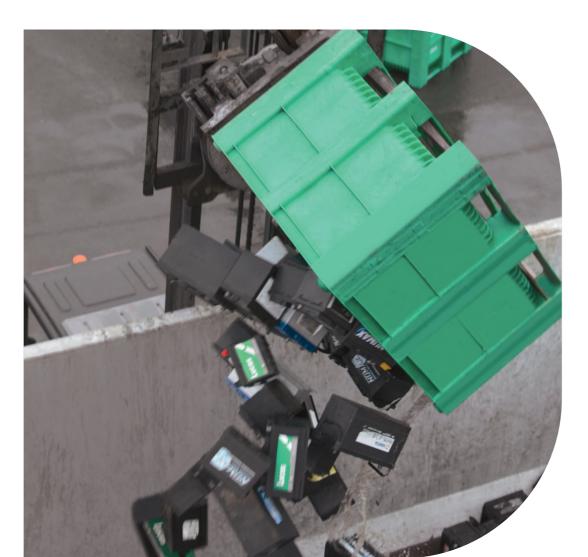

Agriculture

Fruit & Vegetable Solutions

For over 40 years, DOLAV box pallets have been widely used for collecting and processing fruit and vegetables. Our boxes contain a UV additive for protection against long-term sun exposure and are suitable for use in temperatures ranging from -40° C to $+60^{\circ}$ C. Our unique stacking method enables stack loading of up to 8 box pallets in cold storage with great confidence.

Our agricultural boxes come in a variety of sizes suitable for the picking and storage of many types of fruits and vegetables. We recently launched the largest box pallet in the agriculture market, the DOLAV Alto 1400, which is robust and strong enough for heavy-duty demands.

14 **DOLAU**® | Product Overview

DOLAV Box Pallet Family

DOLAV ACE

DOLAV ACE box pallets are perfect solutions for industries applying strict requirements for impact resistance. With over 1 million DOLAV box pallets in global use, our ACE boxes are the market's leading injection moulded box pallets. Three integral runners and four massive corner pillars ensure they can be safely stacked and tipped whilst offering greater impact resistance.

The boxes incorporate our exclusive anti-slip corners that ensure safe stacking capacity of up to eight box pallets. DOLAV's ACE series was tested by TÜV SÜD and proclaimed highly suitable for use in industries with exceptionally stringent requirements.

DOLAV Type 800

Incorporating our unique foam injection technology, DOLAV Type 800 box pallets are the right choice for applications demanding high durability. Including integral runners, these box pallets are also ideal when high-level hygiene is required. In addition, their exceptional strength makes them suitable for transporting heavy products intended for recycling.

Our unique stacking system ensures stable stacking of up to 8 box pallets. The designed strength of Type 800 boxes makes them exceptionally suited for recycling of expired food products, lithium batteries, fluorescent bulbs and more. These UN-certified boxes are produced in different sizes and lengths according to customer requirements.

DOLAV ECOLINE

Available in three different volumes (485, 590 and 650 litres), DOLAV Ecoline box pallets are specially designed for storing and transporting light products of large volume for various industries. The relatively low weight of these boxes makes them exceptionally cost-effective. Ecoline boxes incorporate our exclusive integral runners and anti-slip corners, ensuring safe and secure stacking with high confidence. The Ecoline box pallet range offers an ideal solution for areas with narrow aisles and limited space, while the option to add wheels enhances mobility.

The recently launched DOLAV Alto 1400 box pallet is a giant 1400-litre container.

The Alto is designed for diverse uses with a focus on cold storage of vegetables and food ingredients as well as the collection of waste materials for recycling. This new DOLAV box is produced with the same technology used with our other box pallets, which gives it high impact resistance. Its wider pillars enable improved and safe stacking under heavy loads. Hygienically designed with smooth surfaces and minimal ribs for the food industry, the box is intended to replace wooden boxes that not only harbour bacteria and mould but also can disperse woodchips and nails in production lines.

Weighing 75 kg, the Alto 1400 can carry 1000 kg and is safe to stack in columns up to 8 containers high.

Product Overview

DOLAV Type 1120

DOLAV Type 1120 box pallets have been the leading containers in Israel's agricultural market for over 40 years. The 700-litre box is made of four massive corner pillars and three long floor beams that give it unbeatable stacking and impact qualities. These box pallets incorporate our exclusive anti-slip corners that provide them with high stacking capacity of up to 8 boxes in cooling storage. The 1120 boxes are produced with UV protection suitable for increased long-term sun exposure.

DOLAV Type 1120H

The DOLAV Type 1120H is a breakthrough in hygienic box pallets for the food market. Thanks to DOLAV's injection moulding technology, the box is produced with smooth thick walls that compensate for the minimal number of external reinforcing ribs. Very easy to wash and clean, this new box is an attractive replacement for expensive stainless-steel box pallets widely used in the food industry.

DOLAV Foldable Family

DOLAV KirBin

DOLAV KitBin collapsible box pallets are uniquely designed for flexibility. The KitBin system comprises a pallet base and four independent sides, fitted together to create a modular container whilst offering space savings when not in use. Its unique interlocking mechanism is the key to KitBin's flexibility, enabling each side panel to lock into position around the pallet base while ensuring added strength. This allows sidewalls to be built up to three levels, enabling variable volumes of 617, 1234 or 1851 litres, and three walls can be built up while one wall is left open for easier loading.

Universal lid DVF lid

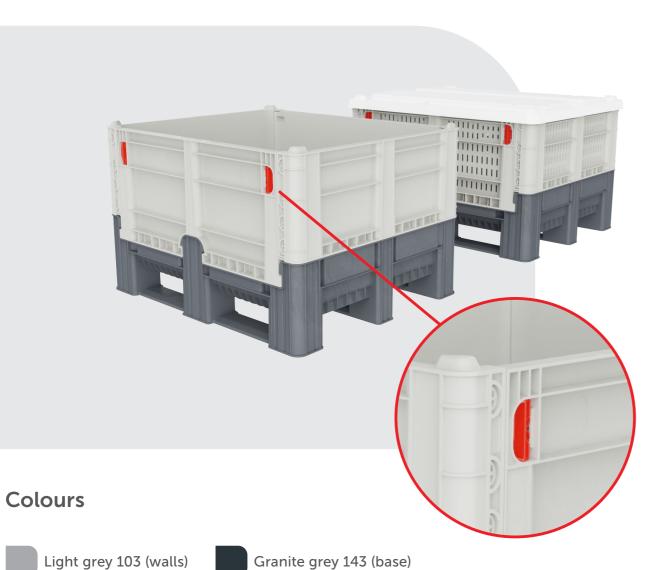

The DOLAV DFLC is one of the world's most hygienic foldable box pallets available today.

While most foldable boxes are made with external and detachable accessories, DOLAV has created a fully hygienic foldable box produced with integral hinges to avoid contamination spots, making it particularly appealing for the food market.

This model also includes drainage holes that prevent the accumulation of liquids in hidden pockets. Its unique anchor handle prevents the bending of the floor under high load and the disassembly of the walls when the box is turned over for emptying. The use of integral hinges allows quick and easy disassembly and assembly for washing. Our unique anti-slip corners ensure high stacking capabilities, including in columns with our market-leading DOLAV ACE box pallets.

The DFLC foldable box pallet has been successfully tested by TÜV SÜD.

42 **DOLAU** Product Overview

DOLAV MH Pallet

DOLAV MH pallets are hygienic pallets that are perfect for cleanrooms and other applications in the pharmaceutical, chemical and food industries.

These pallets offer maximum hygiene as both the top and bottom decks are completely closed. Their design is free from cavities or ribs, which ensures reliable protection from contamination or water ingress.

DOLAV MH pallets are available with steel reinforcements for heavy load racking and automated warehouses.
